

Wednesday Challenge Form

Group Members: Evan, Monte, and me

Problem Statement: Build a house using cards. No adhesives allowed, or bending the card.

Approach: Use triangles. It's easy to build, and it can support the most weight. Also, it's the most conservative option.

Solution: Triangles are the best option. The base needs to be just big enough to support the top.

Lessons Learned: Build faster. Don't use as many cards for the base.
